April 7, 2014

The Academy for the Love of Learning is very excited to have designed and constructed a new campus that is gold LEED registered (the nationally accepted benchmark for the design, construction, and operation of high performance green structures) endorsed by the USGBC (United States Green Building Council). At the Academy for the Love of Learning, environmental stewardship is one of our core principles.

As we are located in Seton Village, our water is exceptionally hard. A salt softener, given their negative environmental impact was out of the question. To deal with the scale issues associated with hard water, New Water Innovations recommended HydroFLOW, a physical water treatment product. Much to our pleasure, the HydroFLOW product has performed superbly well in keeping our water heaters scale free and performing at full efficiency.

The water feature in our main entry area is much easier to maintain because of the performance of HydroFLOW. Not only does it deal with lime-scale accumulation, it also kills any bacteria that are often found in open loop water features. New Water Innovations also recommended "Environmental Water Systems" carbon filtration to remove all chlorine and provide high quality water throughout the entire facility. The combination of HydroFLOW and EWS solves all of our water quality issues effectively in a manner consistent with our environmental goals.

Sincerely,

Aaron Stern
Founder and President
