To whom it may concern

**Subject: Hydropath Marine units-Recommendation**

Ray shipping company has currently more than 60 ships equipped with Hydropath Marine units for Fresh Water Generator and Fresh Water Systems.

The system was first successfully tested on Fresh Water Generator on board of a Car Carrier, M/V Hoegh America.

Since the HM solution was installed on our first ship, the lime scale and bacteria corrosion, have been completely reduced and kept the system clean with no further maintenance work.

As it appears in the last 2 years, the systems proved to be easy to install, very efficient in its technical results, economical, saving labor work, spare parts, chemicals and preventing damages.

The system is a simple "add-on" unit, was been executed by the S/I, fitting external pipes and does not require any maintenance or component replacements.

The Hydropath Marine system saved us crew's labor hours and costs and also replaced the use of expensive and hazardous chemicals.

With such good results, Ray Shipping ordered via Stamco (our Management Shipping Company) the Hydropath Marine solution for all vessels in the fleet.

I can safely say that Hydropath Marine solution is one of our best cost effective investments recently done on our vessels.

With kind regards,

Omri Dagul  
Executive VP  
Ray Shipping Ltd.
